**A ROTATION IS A
TRANSFORMATION IN WHICH A
FIGURE IS TURNED AROUND A
FIXED POINT, CALLED THE
CENTER OF ROTATION .**

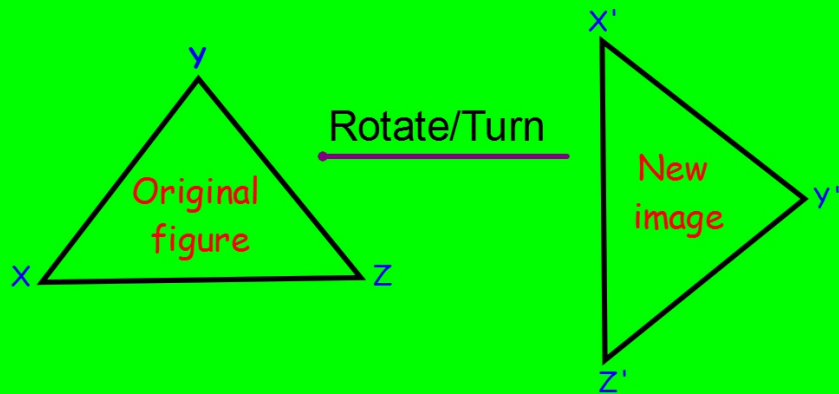

Rotating a figure creates a congruent figure called an image. The original figure and the image have the same shape and same size and are an equal distance from the center of rotation.

Rules for **Rotations** about the origin (0, 0)

Degrees	Clockwise	Counterclockwise
90°	(x, y) → (y, -x)	(x, y) → (-y, x)
180°	(x, y) → (-x, -y)	(x, y) → (-x, -y)
270°	(x, y) → (-y, x)	(x, y) → (y, -x)
360°	(x, y) → (x, y)	(x, y) → (x, y)

When an image $ABCD$ is rotated,
the new image is $A'B'C'D'$.

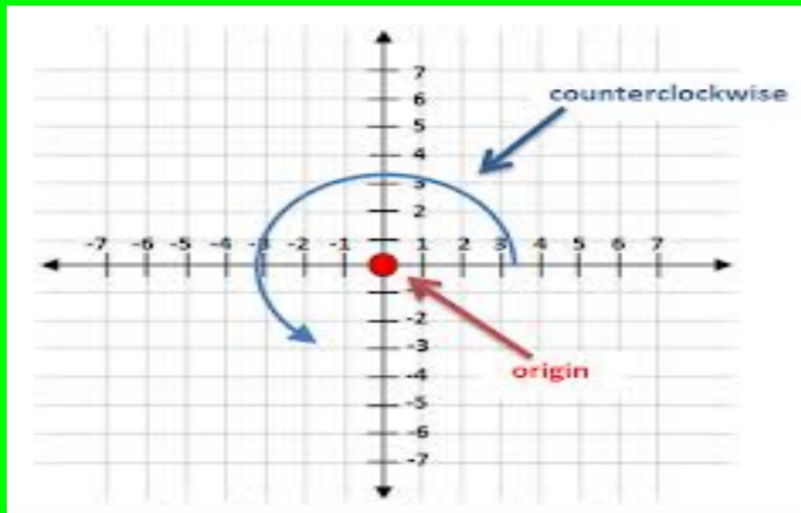

**Make sure you label the original figure XYZ and the new image will be labeled with the "prime" marks: $X'Y'Z'$.

Clockwise Rotations at different degrees examples:

Counterclockwise rotations move to the left around the center of rotation.

Counterclockwise rotation:

$$X \longrightarrow Y = 90^\circ$$

$$X \longrightarrow Z = 180^\circ$$

$$X \longrightarrow A = 270^\circ$$

$$X \longrightarrow X = 360^\circ$$

Rotate the right triangle ABC:

- a) 90° counterclockwise
 $(x, y) \Rightarrow (-y, x)$
- b) 180° counterclockwise
 $(x, y) \Rightarrow (-x, -y)$
- c) 270° counterclockwise
 $(x, y) \Rightarrow (y, -x)$

*Make sure your new image is named with "prime" marks.
